Monitoring and Automatic Recording with Logger 2.0

DECEMBER, 2025

Logger 2.0 is the ultimate solution to ensure that every detail of your broadcasts is automatically recorded and securely stored. With a high-quality recording system and real-time monitoring, you can review and retrieve any transmitted content—whether for quality control, auditing, or sharing important moments with your audience.

Logger 2.0 also allows custom storage and file segmentation settings, making it easier to search for and access recorded material. This provides an efficient experience for managing your audio archive and ensures that you never miss a single important second of your broadcasts, offering full control over live content.

Logger 2.0 is part of the Automation Suite, but it can also be purchased separately.

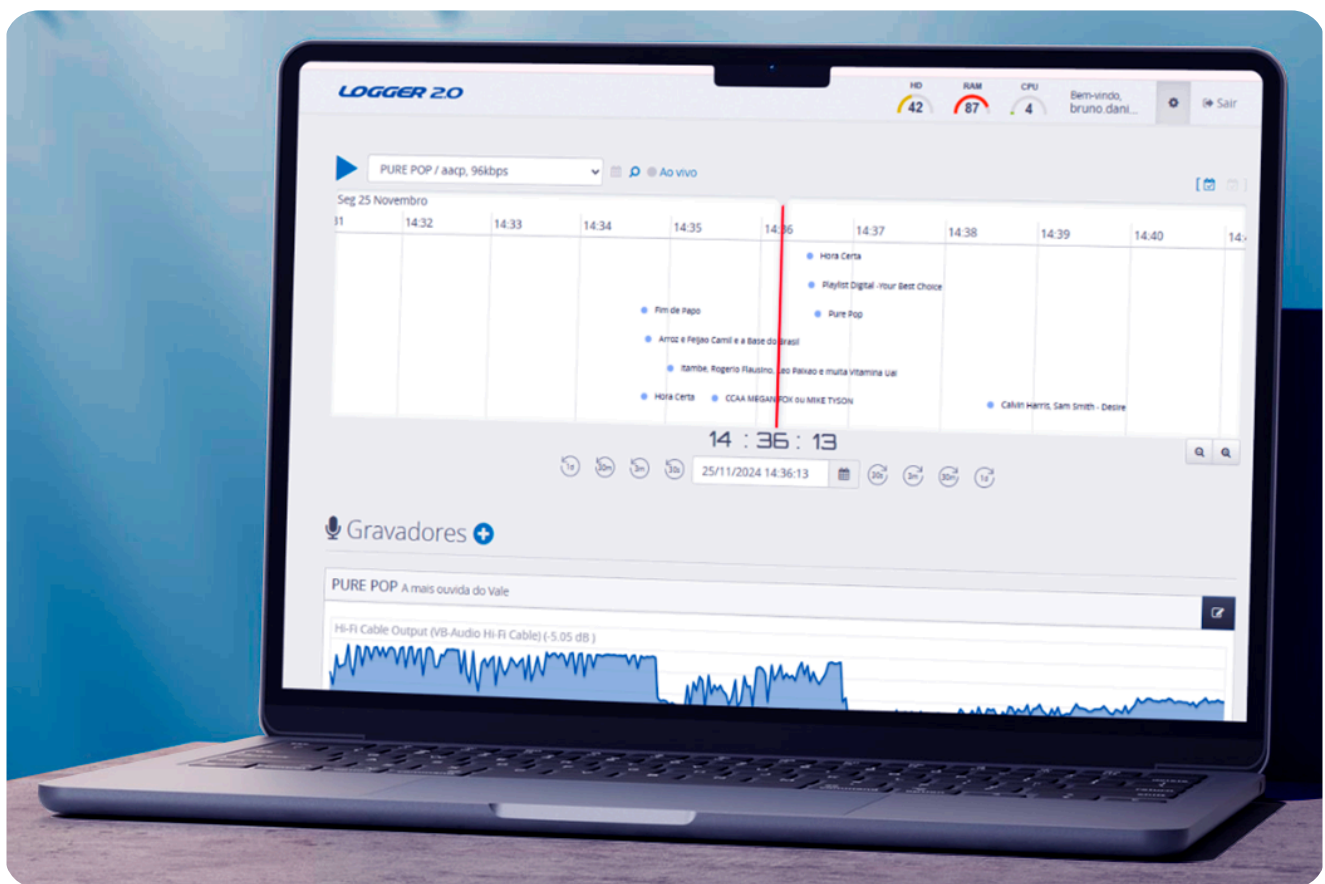

Key features include:

- Specific Events Recording
- Audio Streaming
- Aircheck of Recorded Content
- Access from Any Mobile Device
- Multiple Radio Stations Recording with a Single License

The Most Powerful Software for Audio Recording and Broadcasting

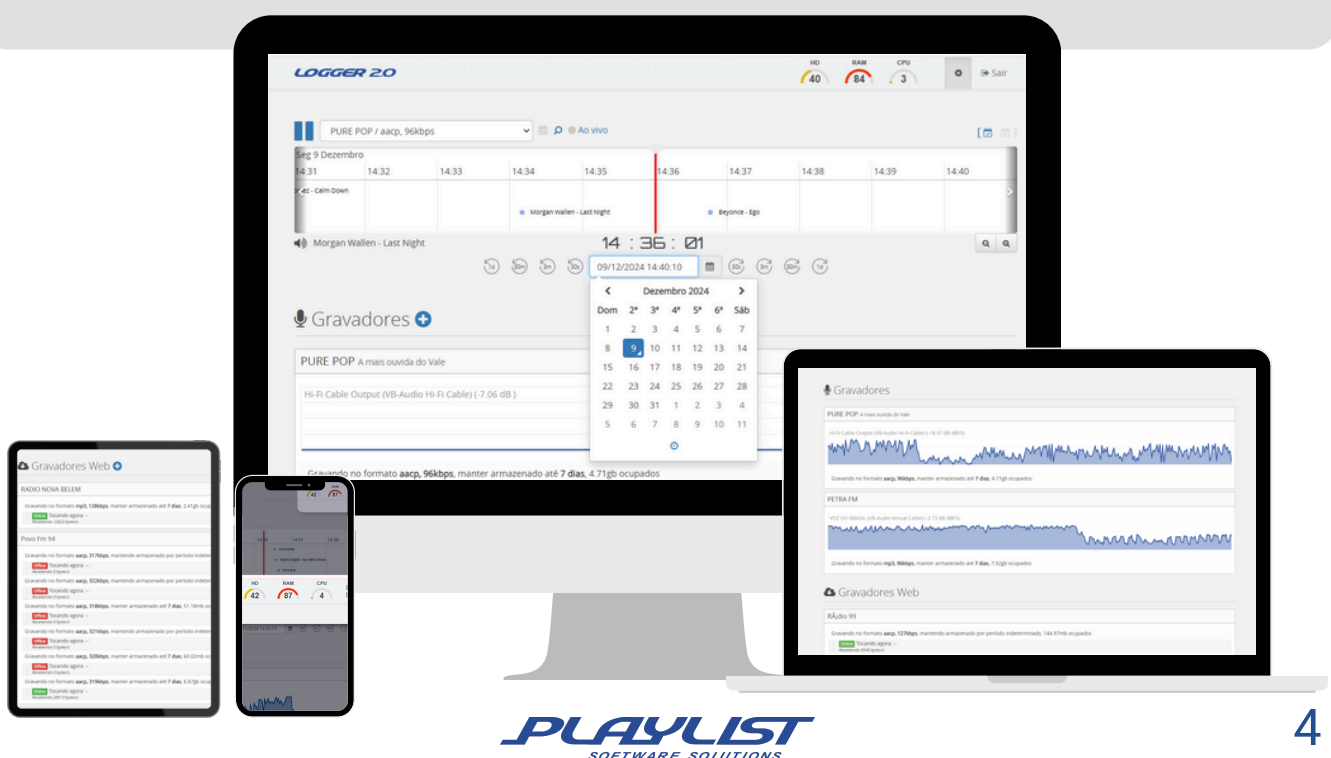

Built on innovative concepts in computer system programming, **Logger 2.0** automatically records and monitors content – either fully or partially, live or at scheduled times – broadcast on radio stations or any other audio-based medium. Users can easily and quickly configure, access, and manage all content. Additionally, the software allows audio streaming to the Internet 24/7 in various quality levels, making it a multifunctional solution.

The entire system has been designed for use by various business models or individuals who wish to record, monitor, and stream audio over the Internet.

Features

- **Recording Multiple Radio Stations:** Record any audio from a radio station or other source 24/7 in MP3 or AAC, at multiple bitrates, using local sources such as receivers, consoles, or Internet streams. **Logger** is the only software that offers you this capability.
- **Audio Streaming:** Stream audio to Shoutcast or Icecast 24/7 in AAC at your desired quality, using as a source the audio from a console, receiver, or even audio from an existing stream.
- **Event Scheduling:** With the event scheduling feature, you can specify days of the week, periods, and times for recording. Schedule the recording of your favorite programs, shows, news broadcasts, etc., without having to record an entire schedule, and listen to it whenever you wish.
- **Timeline:** Provides all information such as date, time, audio name, and events, allowing easy navigation, search, playback, and downloading of the desired audio. Additionally, it is possible to listen to the entire schedule live at the time of broadcast.
- **Mobility:** Gain unprecedented access to all recorded content from any mobile device—smartphone, tablet, or laptop—anywhere and at any time. Listen to and share all recordings, broadcast logs, the most-played inserts, and more.

Email or Push Notifications: Rest assured, **Logger** features an innovative notification system that informs you via push notifications and/or email of any and all anomalies in the system.

Recording Management: Wherever you are, using an Internet connection, you can fully manage and monitor recordings, add or remove event schedules, save and send recordings, edit recorders, and much more.

Podcast Distribution: With powerful search and timeline viewing features, you can save your favorite programs and make them available as podcasts on your website.

User Management: Remotely manage all user actions, including usage permissions, adding, editing, and deleting users.

Ease of Setup and Use: The entire process of configuring IP addresses and communication ports is automatic. Once downloaded and installed, the system is ready to use—you only need to specify the audio sources, and the system will start recording immediately.

Productive Workflow: You have a complete suite of applications that makes the entire workflow much more productive and efficient. The **Logger** system consists of the following applications: Logger Server, Logger Manager, Logger Monitor, iLogger, and web applications. This entire system provides a world of possibilities for recording, streaming, and monitoring audio.

Customer Area

The Customer Area is a direct communication channel between the customer and Playlist support. Through the website **www.playlist.com.br**, all customers with an active Support Plan can easily, quickly, and cost-effectively access a variety of services related to Playlist software support.

Advantages:

- **Fast Support**
- **Complete Issue Management**
- **Online Updates**
- **Data Management**
- **Product Information**
- **Additional Services**

The Customer Area offers significant savings for your station. When technical support is needed, users do not have to make a phone call or wait in a support queue. Simply access the Customer Area at **www.playlist.com.br** and submit your request, and within minutes a support analyst will respond. Additionally, access to software updates and other information is fast and efficient, ensuring zero cost for obtaining services from Playlist technical support.
